

# Composition on Computer as A Blessing of Science

**Question:** Write a short composition that expresses your opinion about "Computer a Blessing of Science".

**Answer:** Computer is a wonderful invention of modern science. It is an ultra-modern electronic device for storing and analyzing information fed into it. It has no capacity to do anything by itself. It works on the basis of commands given by the operator.

The computer was not invented overnight. It took a long time and hard labor to invent the computer. Many votaries of science worked hard. First of all, Pascal invented the theory of "Digital Calculating System" in 1642. Though his attempts were not crowned with success, he initiated the research which paved the way to the invention of the computer. Finally, Mr. Howard Akin, an American scientist invented such the machine in 1937 that could do difficult sums. So, the credit for the invention of the modern computer goes to Howard Akin. After seven years electric computer was used in Harvard University in 1944. After that many other computers have been invented such as EDSAC in 1945 and ENIAC in 1946 etc.

A computer consists of five major components. They are the input unit, the output unit, the memory unit, the control unit, and the arithmetic unit.

A computer performs three functions, such as it receives data, processes data by various computations and emits data.

The computer is of great use to us. It renders great service to mankind. It is like Aladdin's magic lamp or a magic wand. It has lessened our workloads and made our life easy and comfortable. It is

used in our daily life for various purposes.

The computer is a medium of education in the developed countries. The students of the developed countries use a computer to prepare their study materials. They learn many things within the shortest possible time. Results of various examinations are prepared accurately with the help of computer within the shortest span of time.

Nowadays in developed countries computer is used to diagnose a disease. A newer process of operation has been invented by the computer as an alternative to surgery. It is used to grind stones in normal pathological tests. Today computer is used in the fields of agriculture in the developed countries.

Nowadays business, commerce, and trade cannot be thought of without a computer. It does wonder. It is used to prepare documents, to make lists of goods, store information and to prepare budget etc. The value of currency and price of any share can be known instantly by the computer.

Today printing cannot be thought of without a computer. It is an indispensable part of printing. Thousands of books are composed with the help of computer within a very short time. In the developed countries the computer is used to run mills, factories, and industries. Trains and planes are run by the computer.

The computer is a source of great income. Many developed and advanced countries export software and hardware and earn a lot.

Of late computer has been introduced in Bangladesh. Many government and non-government offices, educational, institutions are using a computer. A course on the computer has been introduced in secondary and higher secondary levels. The day is not far to come when

computers will be used in every sphere of life.

The computer is of great use to us. We cannot go a single moment without computers. It is part and parcel in our daily life.
