

Short Essay on Science In Everyday Life

Introduction: In the history of mankind, contributing to science is the greatest blessing. Science has come to relieve mankind from suffering, ignorance and to control nature. Modern civilization cannot be imagined without science. Science has also been known as a faithful servant of man. It serves a man as per his orders.

Science in everyday life: In everyday life, science has given men ease and comfort. The way of our life has been very easy and comfortable for the inventions of the radio, television, newspaper, the electric bulb and fan, the telephone and the telegraph, the electric iron and being used in different offices. Science has brought about a revolutionary change in agriculture, food, medical science, communication, etc.

Science in agriculture: modern science has improved a lot in the agriculture sector. Today hi-tech tractors and plugs are being used instead of ancient blunt plows. Modern chemical fertilizers are being used instead of rotten garbage and cow dung. The hi-tech insecticide is being used to protect crops from worms and insects. Hi-breed seeds are being provided through analysis, which has brought about a revolutionary change in the production of crops.

Science in food: food is the main thing among the fundamental demands of human beings. It is increasing gradually in today's world. For this additional food is being needed. With the help of modern science, the productions of all kinds of crops are being increased day by day. As a result of the contribution of science, the production of the cow, poultry and fish, etc. are increasing.

Medical science: with the help of medical science, today men have become free from premature death. Biopsy and ultra-sonography, ultra-

ivory, x-ray, and penicillin are the wonders of modern science in the field of medical science. Various diseases can be examined within a few seconds with these machines. Complicated operations are also possible with the help of science.

Science in communication: The modern communication system totally depends on modern science. Telephone, telex, fax, wireless, telegram, E-mail, etc. All are great inventions of modern science. They have brought the world closer to us. We can send news from one corner of the world to the other within a moment.

Conclusion: science has established human civilization in the world. Above all, science has brought us peace prosperity and has made our everyday life speedy. So, we have to use the power of science properly.
