

Describe and Analyze the Chart of The Percentage of Working People in A-Town Using A Radio Set, A Television Set, and A Mobile Phone

Question: The following chart shows the percentage of working people in a town using a radio set, a television set and a mobile phone in a district of Bangladesh. now, analyze it.

Radio, Television and Mobile Users in A District

Answer: The chart shows the users of the radio set. television sets and mobile phones and the changing phenomena over time. If we analyze the chart, we find that there is a significant growth of mobile phone users over time. From 2005 to 2009, there is a steady rise and after that, there is a sharp rise. From 2005 to 2006 the increase is 4%; from 2006 to 2007 it comes 5% and from 2007 to 2008 it is 5%, but from 2009 to 2010 this increase is quite double. It turns from 25% to 50%. Again, the users of the radio begin to decrease over time. Thus, in 2005 the number of people using radio sets is 50% that decreases to 15% over a period of five years. This decrease is sharp from 2009 to 2010 because it falls from 30% to 15%. If we look at TV users, we also find a change. From 2005 to 2008 the number of users of a TV set increases steadily. From 2005 to 2006 its use is increased to 3%, from 2006 to 2007. it is increased to 2%, from 2007 to 2008 it is further increased to 2%. However, in 2009 the use remains constant that is 42%, and in 2010 the use falls 2%. Thus, from the chart, we find a clear picture of the increased popularity of TVs and mobiles and the decreased use of radios.
