

Describing the Graph of the Choice of Profession by Different Educated People

Question: The graph below shows the choice of profession by differently educated people. Describe the graph in 150 words. You should highlight and summarize the information given in the graph:

Choice of Profession by Educated

Answer: The graph shows the choice of profession by different educated people. According to the graph, more than 60% of educated people choose Govt. job as their career. Business is liked by 25% educated people, farming is chosen by 10% people and only 5% people like intellectual work as their profession. Analyzing the graph, we see that most educated people's choice is for govt. job. Again, the least number of people like intellectual work as a choice of their professional career. Compared to farming and intellectual work more people like a business. Thus, we can say that farming is liked by more people than that of intellectual work. Again, business is liked by more people than that of farming. Again, Govt. job is liked by more people than that of business. Therefore, serially from lower to higher these professional careers are intellectual work, farming, business, and Govt. job.
