

Paragraph on An Airbus/ A Plane

An airbus is a kind of flying and moving carrying container. We use it as our vehicle. It carries our goods and passengers from one place to another within a very short time. It is made of steel and aluminum. The Wright brothers of USA first invented it in 1903. It can fly with the help of an engine. The driver is called the pilot. It has two propellers and some wheels. The wheels are used only at the time of landing and taking off. It is an aircraft and worldwide servicing. All kinds of recreation facilities are available here. Passengers sit on the seats and enjoy their journey. There are some crewers and airhostesses in it. They serve the passengers and provide them food and drinks. It makes our journey easy, interesting and comfortable. Time and distance have been won. But it is a very expensive and royal journey indeed.
