

Paragraph on Arsenic Pollution of Bangladesh

Question:

What is arsenic pollution?

How fatal is it?

What should we do to get rid of it?

What should the government do in this respect?

Answer: Arsenic pollution is a serious health hazard. It is caused by drinking tube-well water containing arsenic. Thousands of people in Bangladesh are suffering from arsenic poisoning. Arsenic poisoning is a slow process. It is due to the gradual build-up nature of the poison in the human body. It causes sores in the body and abdominal pain. Eyes become red, tears fall down from eyes and skin is exploded. It may also cause a problem in liver, kidney, and lungs. We can get rid of arsenic by drinking arsenic free water; by drinking rain-water; by eating healthy balanced diet; by filtering the arsenic polluted water; by drinking the deep tube well water.

Or,

Arsenic Pollution in Bangladesh

In Bangladesh, arsenic pollution has become one of the major problems. Nowadays, arsenic pollution is causing hazards to our health. Arsenic is a kind of poisonous element. This element mixes with water especially with tube well water and pollutes it. This kind of water is harmful to drinking. One of the causes of arsenic

pollution is the use of deep tube well water indiscriminately. The effect of arsenic pollution is very serious. Arsenic can attack different cells in our body. The parts of the body like liver, kidney, heart, stomach, skin etc. are badly affected by arsenic pollution. Due to arsenic pollution, skin gets peeled off. Itching becomes our constant companion. The face becomes flattened. A high cough and ophthalmic attack our body as a sign of arsenic pollution. The facilities for medical treatment of arsenic attack is very inadequate in our country. Patients with this disease are medically treated according to the symptoms. Firstly, the patients must be removed from the source of arsenic. Secondly, the medicine chronic arsenic poisoning must be applied to the sores made on the skin. But these are so expensive in our country that the patients fail to take treatment properly.

Or,

Arsenic Pollution

Question: Write a paragraph about 'Arsenic Pollution'. In your paragraph, describe the fatal diseases caused by it. Write the present circumstance of Arsenic pollution of Bangladesh.

Answer: Arsenic is one of the fatal drawbacks in Bangladesh especially rural area. In our day-to-day life, we are experiencing new kind of problem. Our environment is facing new pollution. Arsenic pollution is one of them. It is one of the big problems of our country. Arsenic pollution is causing much harm to human life. It is found in water especially in tube-well water. By drinking this water,

people are suffering a lot. It causes sore in the fingers of in any other part of the body. By drinking water, polluted by arsenic people get diseased in various ways. Sometimes the sore turns into gangrene and then to cancer. So, arsenic pollution is a threat to human life. At present, there is no medical treatment or medicine that can prevent arsenic pollution. The bad effect of arsenic cannot be described in words it is a poison. If it is mixed in our body this or that way, we are sure to suffer in life. Therefore, we should take utmost care and guard against this poison. We should find out the remedy for this problem.
