

Paragraph on Global Warming

Global warming, the rising temperature around the world, has some causes and effects. The main reason for this global warming is the huge amount of carbon resulting from environmental pollution. Again the destruction of forests adds to this problem. The growth of industries, the increasing number of vehicles, and the use of CFCs in manufacturing and packaging industries are also the causes of the rise in temperature in the atmosphere. This increase in the world's temperature has some fatal consequences for humans, animals, and plants. The increased amount of heat will melt the huge ice of the polar ice-caps and thereby, the sea level will rise. Then the salty water of the sea will mix with the river water and will come into the farmlands. Then the fertility of the lands will be lost and man's ability to grow crops will be reduced. Furthermore, the lower regions of the world including the coastal areas of Bangladesh will go under water. Again, if the temperature rise continues, many of the species of animals will become extinct forever. So, effective measures must be taken to prevent global warming. Planting more trees and expansion of forestation programmes can go a long way to tackle the situation. Using environment-friendly machines and avoiding the use of CFCs can also reduce the amount of carbon dioxide in the atmosphere. By taking all these steps, we could prevent global warming so that we can make our lives danger-free.

Paragraph on Global Warming / Climate Change

Global Warming is the result of climate change which is caused by the gradual increase in temperature in the world. It has become a current issue and is being discussed worldwide which is creating great havoc for us. There are many causes of global warming. Deforestation at random is the main culprit of global warming. An increasing number of

human settlement and rapid industrialization create global warming seriously. The impact of global warming beggar's description. It has become very difficult to endure the excessive amount of heat during the summer season. Floods and droughts have become common affairs throughout the world. The sufferings of the people are over on the increase. It has a great impact on agriculture. The crops are not grown properly. If global warming keeps on increasing, the polar ice will be melted and the sea level will rise. Some coastal areas of the world will go underwater will also affect human health and psychology as well. People are being mentally disturbed by it. Therefore, we should be conscious of the impact of global warming and the concerned people should take necessary steps to control climate change for a better world and comfortable living for the living beings on earth.

Or,

Global Warming

Question: Write a paragraph about 'Global Warming' by answering the questions below.

What is global warming?

How is it caused?

What is the main cause of global warming?

How is it a threat to the environment?

How can it be checked?

Answer: The world climate is undergoing a significant change. Nowadays world temperature is increasing. The increase in temperature is caused by the increased amount of carbon dioxide around the earth. This increase in temperature in the world is known as global warming. The greenhouse effect is the most likely cause of this global warming. As a result of population growth, and indiscriminate cutting

down of trees there is an imbalance in the ecology. More people are 'exhaling more carbon dioxide. Moreover, as a result of cutting down trees, we are getting less, oxygen. So carbon dioxide is increasing day by day. By 2050 the temperature may rise by 4°C. Global warming may reduce mankind's ability to grow food. destroy wildlife, raise sea levels, and thereby flood coastal areas and farmland. The lower southern part of Bangladesh may go underwater because of the rise of sea level. So it is urgently necessary to prevent global warming. We can prevent it by being careful and raising public awareness. Global warming can also be checked by planting trees in large numbers as well as by preserving those that were planted earlier.
