

Paragraph on Problems of Our Farmers

Question: Answer the following questions to form a continuous paragraph. (100 words)

What are the problems that our farmers face in our country?

Why do you call them problems?

Do you think that drought and over-rainfall are the major problems of our farmers?

How can those major problems be solved?

Can you suggest any measures for the good economic condition of our farmers?

Answer: The person who does the work of farming is known as a farmer. He is most often illiterate. He does not know how to plow his land scientifically. He cannot apply the scientific method. He has only a pair of bullocks and some handmade tools. Often, he does not have enough money to buy seeds, fertilizer, or pesticides. These are the typical problems that our farmers face in, our country. He cannot produce more food and cannot make proper use of his land. So, I call them problems. Yes, I think that drought and excessive rainfall are the major problems for our farmers. So, to get rid of the drought problem proper arrangements should be made for irrigation by digging canals and sinking tube wells. Drainage canals should be made so that excess water is drained out during heavy rainfall. The farmers should be given loans without interest and on easy terms for our seeds and fertilizers. The farmers should be encouraged to cultivate a high-yielding variety of crops and to use proper fertilizers.

Or,

Problems Of Our Farmers

Question: Write a paragraph about the Problems of our Farmers by answering the questions below.

What are the problems that our farmers face in our country?

Why do you call them problems?

Do you think that drought and over-rainfall are the major problems of our farmers?

How can those major problems be solved?

Can you suggest any measures for the good economic condition of our farmers?

Answer: The person who does the work of farming is known as a farmer. The farmers of our country are usually poor and illiterate. They do not know how to plow their land scientifically. They cannot apply the scientific method. They have only a pair of bullocks and some handmade tools. Often they do not have enough money to buy seeds, fertilizer, or pesticides. These are the typical problems that our farmers face in our country. They cannot produce more food and cannot make proper use of their land. These are their problems. Again drought and excessive rainfall are also the major problems for our farmers. To get rid of the drought irrigation arrangements should be made by digging canals and sinking tube wells. Drainage canals should be made so that excessive water can be drained out during heavy rainfall. The farmers should be given loans without interest and on easy terms to buy seeds and fertilizers. The farmers should be encouraged to cultivate a high-yielding variety of crops and to use proper fertilizers.
