

Short Paragraph on Environment Pollution

Question: Write a paragraph about 'Environmental Pollution.' Your paragraph should include the answers to the following questions.

What is the environment?

What do you mean by environmental pollution?

What things make the environment polluted?

How are the elements of nature polluted?

What can be done to prevent pollution?

Answer: Land, air, water, and all other things around us make our environment. Environmental pollution means a remarkable change in chemical, physical and biological characteristics of the environment. It has become a serious problem in today's world. In our cities, the air is constantly being polluted by smoke from factories and carbon dioxide gases emitted from motor vehicles. The ground we walk on in both urban and rural areas is polluted by uncollected garbage. Water is polluted particularly as a result of untreated sewage. Industrial wastes and insecticides alarmingly pollute water. Another kind of pollution is sound pollution. We have noise from motor vehicles, mills and factories, airplanes, domestic appliances, radios, CD players, and so on. The air we breathe in the water we drink, and the food we take is not always absolutely safe for our health. Environmental pollution leads us to the way of death. So, to live a happy and healthy life. Environmental pollution must be checked. And for this, effective steps should be taken immediately.

Environment Pollution

Question: Write a paragraph about 'Environment Pollution' by

answering the questions below.

What does the word environment mean?

Are the elements of our environment being polluted?

How is air polluted?

Is it possible to prevent pollution?

What is your comment?

Answer: Environment refers to the air, water, and land in which people, animals, and plants live. The elements of environment are constantly being polluted by men. The world is producing millions of tons of domestic rubbish and toxic industrial waste each year. It is difficult to find suitable locations to get rid of all the refuse. The disposal of various kinds of waste is seriously polluting the environment. Air, the most important element of our environment is being polluted in various ways. Man makes fires to cook food, make bricks, melt tar for road construction, and do many other things. Fire creates smoke and pollutes the air. Railway engines and powerhouses create smoke by burning coal and oil. Mills and factories also belch a lot of smoke. Buses, trucks, and cars use petrol and diesel oil. These too emit smoke. All these kinds of smoke pollute the air. Water, another vital element of our environment, is being polluted in different ways. Man pollutes water by throwing waste into it. Farmers use chemical fertilizers and insecticides in their fields. When rain and flood wash away some of these chemicals, they get mixed with water in rivers, canals, and ponds. Mills and factories also throw their poisonous chemicals and waste products into rivers and canals and thus pollute the water. Water vehicles also pollute rivers by dumping food wastes and human wastes into them. Insanitary latrines and unsafe drains standing on river and canal banks are also responsible for water pollution. It is true that we can not prevent environmental pollution but it is possible to reduce the rate of pollution if we act judiciously.

Or,

Environment Pollution

Environmental pollution means any unusual change in chemical, physical, and biological factors of surroundings. Nowadays environmental pollution is one of the important questions in the world. Because it is a fear of human existence. The environment is polluted in many ways. Modern industrial development is the main cause of environmental pollution. In big industrial areas, air is polluted seriously as there are lots of mills, factories, and industries that give out poisonous smoke in the air. Besides, there are many motor vehicles like buses, trucks, and cars in the cities and towns that produce smoke and pollute the air. Again the rivers, canals, and lakes near the mills, factories, and industries are polluted by their waste production. The use of chemical fertilizer and insecticides in crop fields pollutes air and water to a greater extent polluted air and water are very dangerous for life on earth. They cause many life-taking discussions like cancer, heart attack, etc. They increase bronchial injuries, burning sensation in the eyes, and damage to the lungs.

Environment Pollution Paragraph

Environment pollution means the lack of balance among the elements of the environment. Environmental pollution is a serious problem. Our environment is polluted mainly by four factors. Water pollution is one of them. Man pollutes water in many ways. They use chemical fertilizers inland. Chemical fertilizers pollute water. Industrial waste, human waste, natural calamities, unsafe drains and latrines, washing powder, and water vehicles pollute water. Secondly, is air

pollution. Buses, trucks, brick kilns, mills, and factories produce smoke. This smoke pollutes the air. Thirdly, is noise pollution. Horns, microphones, vehicles, industries, and primary school teaching cause sound pollution. Finally, comes odor pollution. The rotten things around us cause odor pollution. Environmental pollution causes many problems. Water pollution causes water-borne diseases like cholera and diarrhea. These two diseases often lead children to death. Air pollution causes pneumonia, bronchitis, and other respiratory diseases. These three diseases are very fatal, especially for children. The problem of sound pollution is very great. It also damages the hearing. Environmental pollution must be controlled as soon as possible. We have to raise public awareness. Our farmers should use natural fertilizers. Various types of wastes should be disposed of in a suitable location. People should be encouraged to build sanitary latrines and safe drains. Careful town planning is needed to lessen sound pollution. The law should be properly implemented to lessen air pollution. So, we all should be aware of this harmful pollution and take effective measures to check it for a Comfortable living.
